

## Dog Waste Composter Step-By-Step

Use a garbage bin (old or new).

Drill holes in the sides.

Then use a keyhole saw to cut out the bottom.

The bottom is removed.

Dig a hole for the bin.

Toss rocks into the hole for drainage.

The bin fits well.

Once dog waste is in the hole, add a digester and water.

The waste decomposes and enters the subsoil. It is not used on garden beds.

## Dog Waste Composter Step-By-Step

Also, best to use a product called Dijest-it
